

I am in favor of not diluting Part 15 rules regarding BPL Docket 04-07. This technology will cause problems in the HF radio spectrum unless closely regulated. There is a good chance that this technology (BPL) will be made obsolete by newer and better methods in the near future. It seems to me that this is more a political decision vs a solid technical solution to a growing need. As someone who has been licensed by the FCC since 1976 I expect the FCC to protect the radio spectrum and address technical problems. I hope I have not been wrong in my belief.
